Patent No. US2002026508A1

GENERAL INFORMATION:

APPLICANT: Holtzman, Douglas A.

APPLICANT: Goodearl, Andrew D.J.

APPLICANT: MCCARTHY, SEAR A.

TITLE OF INVENTION: NOVEL GENES ENCODING PROTEINS HAVING

TITLE OF INVENTION: NOVEL GENES ENCODING PROTEINS HAVING

TITLE OF INVENTION: PROGNASTIC, DIAGNOSTIC, PREVENTIVE, THERAPEUTIC, AND OTHER

TITLE OF INVENTION: DATE: 2001-02-21

FILE REPERENCE: 07334-32201

CURRENT APPLICATION NUMBER: US 09/065,661

PRIOR APPLICATION NUMBER: US 09/298,531

PRIOR APPLICATION NUMBER: US 09/298,531

PRIOR FILING DATE: 1998-04-23

PRIOR PLING DATE: 1998-04-23

PRIOR FILING DATE: 1998-04-23

PRIOR PLING DATE: 1998-06-22

PRIOR FILING DATE: 1998-06-22

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequences given in AAR48552-54 represent elafin derivatives. The DNA encoding wild type elafin is mutated, inserted into a suitable vector and then used to transform E. coli, yeast, Bacillus subtilis or animal cells. The modified elafin is expressed when the elastase inhibitor arc tultured. The modified elafin are drugs with elastase inhibitor activity. They have improved oxidation stability over natural elafin and thus retain activity better under oxidative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pPIC9/ELF25L cDNA construct containing the elafin 25L gene protein.

The present sequence represents the protein from the pPIC9/ELF25L cDNA construct containing the elafin 25L gene, used in an example of the present invention. The present invention describes: (1) an elafin (EL) expression vector comprising a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a gene encoding EL and a first region homologous to the genomic DNA of the host (b) a prometer region of (AOCR) gene; (c) a gene encoding signal peptide; (d) a linker designed to secrete a matured elafin; (e) a gene encoding EL; (f) selection marker gene; (g) stop codon, and (h) a second region homologous to a part of the genomic DNA of the host, and (4) a microbial host transformed with the DNA fragment of (3). The microbial hosts can be used to prepare EL commercially. The production of EL by the microbial hosts can be carried on a large scale.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

The sequences given in AAR48552-54 represent elafin derivatives. The DNA encoding wild type elafin is mutated, inserted into a suitable vector and then used to transform E. coli, yeast. Bacillus subtilis or animal cells. The modified elafin is expressed when the transformed cells are cultured. The modified elafin are drugs with elastase inhibitor activity. They have improved oxidation stability over natural elafin and thus retain activity better under oxidative
                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents elafin from the present invention. The present invention describes: (1) an elafin (EL) expression vector comprising a gene encoding EL and a gene encoding alcohol oxidase 1 controlling region (AOCR) which controls the expression of EL encoding gene; (2) a microbial host transformed with the vector; (3) DNA fragment for recombinant transformation comprising: (a) a first region homologous to the genomic DNA of the host; (b) a promoter region of (AOCR) gene; (c) a gene encoding signal peptide; (d) a linker designed to secrete a matured elafin; (e) a gene encoding EL; (f) selection marker gene; (g) Exp codon, and (h) a second region homologous to a part of the genomic DNA of the host, and (4) a microbial host transformed with the DNA fragment of (3). The microbial hosts can be used to prepare EL commercially. The production of EL by the microbial hosts can be carried
                                      The sequences given in AAR4852-54 represent elafin derivatives. The DNA encoding wild type elafin is mutated, inserted inco a suitable vector and then used to transform E. coli, yeast, Bacillus subtilis or animal cells. The modified elafin is expressed when the transformed cells are cultured. The modified elafin are drugs with elastsee inhibitor activity. They have improved oxidation stability over natural elafin and thus retain activity better under oxidative
                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a new class of proteinase inhibitors called disulfide core proteinase inhibitors (ZdSc1) and provides murine and human ZdSc1 polypeptides. The disulfide core proteins are proteinase inhibitors used for the treament of acute pancreatits, various stages of shock syndrome, hyperfibrinolytic hemorrhage and myocardial infarction. Antagonists of the polypeptides can be used as research reagents for characterizing sites of ligand-receptor interaction. Antibodies against the protein sused for tagging cells that express the protein, for detecting the protein, and for screening expression libraries. Polynucleotides encoding the polypeptides can be used in gene therapy applications where it is desired to increase or inhibit the protein activity. The present sequence represents a porcine elafin, FLE used in homology studies with ZdSc1 polypeptides.
                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is human FLE peptide used in the invention. The present invention relates to disulphide core serine proteinase inhibitor Saci protein. Slaci is a member of a new related subfamily referred to as three-disulphide core family. Serine proteinase inhibitors useful for treatment of acute pancreatitis, various states of shock syndrome, hyperfibrinolytic haemorrhage and myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Porcine; disulfide core protein; Zdscl; myocardial infarction; cancer; acute pancreatitis; shock syndrome; transgenic; transgenic animal; hyperfibrinolytic haemorrhage; antisense; gene therapy; vasotropic; antiinflammatory; haemostatic; cardiant; cytostatic; elafin protein; FLE.
                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polypeptides are serine proteinase inhibitors useful for treatment of acute pancreatitis, various states of shock syndrome, hyperfibrinolytic hemorrhage and myocardial infarction.

The present invention relates to novel disulfide core protein (Zdsc1) proteins and polynucleotides encoding such proteins. Zdsc1 sequences are serine proteinses inhibitors. They are used to treat myocardial infarction, acute pencreatitis, various states of shock syndrome, hypertibrinolytic haemorthage and cancer. Zdsc1 sequences and their antibodies can be directly or indirectly conjugated to drugs, toxins and additionable and used for in vivo diagnostic or therapeutic applications. Fusion proteins containing Zdsc1 or their antibodies can be used to target cell or tissue inhibition or ablation, e.g., to treat cancer cells or tissues. Sequences of the invention can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        potassium ion, ATP-ase inhibitor peptide; cardiac; PCR; polymerase chain reaction.
New isolated disulfide core protein polypeptide for treating acute pancreatitis, various states of shock syndrome, hyperfibrinolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               used to produce transgenic or knockout mice. They are also used in gene therapy and antisense gene therapy. The present sequence is porcine elafin protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

                                                                                                                        The sequence (AAQ44862) encodes the SPAI peptide which is useful as a drug for treating cardiac and vascular diseases. The peptide is found as a pre-sequence (AARS0335) which is amplified using primers (AAQ44863-67)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence (AAQ44862) encodes the SPAI peptide which is useful as a drug for treating cardiac and vascular diseases. The peptid is found as a pre-sequence (AAR50335) which is amplified using primers (AAQ44863-67)

                                                                                                                                                                                                                                                                                         1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a modified therapeutic peptide (1) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptides composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protection; endogenous therapeutic peptide; peptidase; conjugation; blood component; modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.

The gene sequences can be used for the screening of potential inhibitors of cancer metastasis by either: bringing into contact with the cancer metastasis associated protein (CMAP) and determining the degree of binding; or creating a transformant cell line which expresses CMAP and measuring the degree of expression of CMAP using an antibody recognising the protein, either in the presence of the potential inhibitor. IMC-HM cells transformed with antisense CMAP DNA show a lowered ability to metastasise. The present sequence represents a
in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.
                                                                                                                                                           Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              carcinoma cell; IMC-HA1; cancer; metastasis; CMAP; inhibitor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein associated with cancer metastasis and gene encoding it -
useful for screening for potential inhibitors of cancer metastasis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides gene sequences associated with cancer metastasis which are isolated from mouse IMC carcinoma cells by detection of their higher expression in IMC-HM cell lines than in IMC-LM cell lines than in these calls. The gene sequences can be used for the screening of potential inhibitors of cancer metastasis by either: bringing into contact with the cancer metastasis by either: bringing into contact with the cancer metastasis associated protein. Bringing into contact with the cancer binding, or creating a transformant cell line which expresses CMAP and masuring the degree of expression of CMAP using an antibody recognising the protein, either in the presence or absence of the potential inhibitor. IMC-HM cells transformed with antisense CMAP DNA show a lowered ability to metastasise. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      carcinoma cell; IMC-HA1; cancer; metastasis; CMAP; inhibitor; metastasis associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein associated with cancer metastasis and gene encoding it useful for screening for A useful SLPI deriv. is CLPI, a truncated SLPI mol. having only the last 60 amino acids of the native parotid inhibitor. SLPI acts by blocking a host cell enzyme essential for retroviral infection; it is a powerful inhibitor of human leucocyte elastase, cathepsin G and human trypsin. The inhibitor provides an effective and relatively safe method for treating HIV infections.
                                                                    Serine leucocyte protease inhibitor; SLPI; truncated SLPI; CLPI; retrovirus; retroviral infection; HIV; parotid inhibitor; enzyme; elastase; cathepsin G; trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Serine leucocyte protease inhibitor; SLPI; truncated SLPI; CLPI; retrovirus; retroviral infection; HIV; parotid inhibitor; enzyme; elastase; cathepsin G; trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3 EPVKGPVST--KPGSCPIILIRCAMLNPPNRCLKDTDCPGIKKCCEGSCGMACFVP 56

analogue or deriv. A useful SLPI deriv. is CLPI, a truncated SLPI mol. having only the last 60 amino acids of the native parotid inhibitor. SLPI acts by blocking a host cell enzyme essential for retroviral infection; it is a powerful inhibitor of human leucocyte elastase, cathepain G and human trypsin. The inhibitor provides an effective and relatively safe method for treating HIV infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Retroviral infection is inhibited by admin. of an SLPI, or its analogue or deriv. A useful SLPI deriv. is CLPI, a truncated SLPI mol. having only the last 60 amino acids of the native parotid inhibitor. SLPI acts by blocking a host cell enzyme essential for retroviral infection; it is a powerful inhibitor of human leucocyte elastase, cathepsin G and human trypsin. The inhibitor provides an effective and relatively safe method for treating HIV infections.

                                                                                                                                                                                                                                    Retroviral infection is inhibited by admin. of an SLPI, or its analogue or deriv. A useful SLPI deriv. is CLPI, a truncated SLPI mol. having only the last 60 amino acids of the native parotid inhibitor. SLPI acts by blocking a host cell enzyme essential for retroviral infection; it is a powerful inhibitor of human leucocyte elastase, cathepsin G and human trypsin. The inhibitor provides an effective and relatively safe method for treating HIV infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Serine leucocyte protease inhibitor; SLPI; truncated SLPI; CLPI; retrovirus; retroviral infection; HIV; parotid inhibitor; enzyme; elastase; cathepsin G; trypsin.

The peptides inhibit the action of tryptase clara is responsible for the activation of viruses that have exosporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

AAW01843-W01851 are peptides derived from the C-terminal portion of human antileukoprotease. The peptides inhibit the action of tryptase clara is responsible for the activation of viruses that have exosporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Serine protease inhibitor; cytostatic; anti-inflammatory; arthritis; protease mediated tissue destruction; emphysema; glomerulonephritis; periodontitis; muscular dystrophy; tumour invasion; chymotrypsin;
                                                                                                                                                                                                                                                                                  Tryptase clara inhibitor comprises anti:leuko:protease fragment useful for treatment and prevention of tryptase clara activated viral diseases of the respiratory tract, e.g. influenza, RSV, mumps
respiratory tract; lung disease; respiratory syncytial virus; RSV; influenza; Haemophilus influenzae; mumps; measles; paramyxovirus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  26

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB53098 - AAB53122 represent the protease inhibitors Peptide sequences AAB53098 - AAB53122 represent the protease inhibitor of the invention and various orher peptides used in the isolation of the protease inhibitors. The protease inhibitors have cytostatic and anti-inflammatory activity. The serine protease inhibitors protein is useful for treating a protease-mediated condition, which includes protease mediated tissue destruction, e.g. emphysema, arthritis, glomerulonephritis, periodontiis, muscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the proteins, especially by recombinant methods.
                                                                                                                                                                                                                                                                                                                                            protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97526 - AAC97534, AAC97547 - AAC97541 and AAC97581 and AAC97641 represent DNA encoding the protease inhibitors of the invention, and include oligomucleotide sequences used in the isolation and characterisation of the proteins. Primers AAC97555 - AAC97573 and AAC9562 - AAC97613 are used in the
                                                                                                                                                                                                                                                                                                                          This invention relates to new purified and isolated mammalian serine

                                                                                                                                                                                                                                                                                                                                                   retrovirus infection of CD4+ cells comprising contacting the cells with a secretory leukocyte protease inhibitor (SLPI) having the amino acid sequence of a naturally occurring SLPI or a substitution analogue having 107 amino acid residues. SLPI inhibits enzymes whose function are necessary for retroviral infection of the cell. SLPI is a potent inhibitor of elastase, trypsin, cathepsin G and chymotrypsin. The method is useful for treating retrovirus infection in a patient and associated diseases such as acquired immunodeficiancy syndrome (ALDS). The present sequence represents a truncated version of SLPI designated CLPI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA sequences, useful in recombinant DNA techniques for directing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Serine protease inhibitor protein; recombinant; leukocyte elastase; trypsin; secretory leukocyte protease inhibitor; SLPI.
                                                                                                                                                retrovirus infection using secretory leukocyte protease for treating diseases such as acquired immunodeficiency
                                                                                                                                                                                                                                                                                                                             The present invention describes a method for inhibiting, in vitro,

                                                                                                                                                                           The invention relates to a DNA sequence encoding an analog of a mammalian serine protease inhibitor protein. The analog comprises at least eight cysteine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a least one sequence, a Shine-Dalgarno sequence, a ribosome binding site
                                                                                                                                                                                                                                                                                                                                                              or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukcoyte elastase or trypain. The present sequence represents a secretory leukcoyte protease inhibitor (SIPI) analogue that has chymotrypsin and elastase inhibitory activity.
the production of a serine protease inhibitor protein, e.g. leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence of protein with the biological activity of HUSI (human seminal plasma inhibitor) type I inhibitors encoded on pRH31.

construction of DNA encoding the protease inhibitors. Peptide sequences AABS3098 - AABS312 represent the protease inhibitors. Peptide sequences AABS3098 - AABS3122 represent the protease inhibitor of the invention and various other peptides used in the isolation of the protease inhibitors. The protease inhibitor protein as useful for treating a protease mediated condition, which includes protease mediated tissue destruction, e.g. emphysema, arthritis, glomerulomephritis, periodontitis, muscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the proteins, especially by recombinant methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97586 - AAC97534, AAC97541 - AAC97581 and AAC976141 represent DNA encoding the protease inhibitors of the invention, and include oligonuclectide sequences used in the isolation and characterisation of the proteins. Primers AAC97535 - AAC97573 and AAC95582 - AAC97613 are used in the

                                                                                                                                                                                                                                                                                                                                                     Single polypeptide chain protein with at least one active site possessing serine protease inhibitor activity. The protein la resistant to denaturation by heat and acids and is resistant to proteolytic enzymes. It also has the ability to refold following complete reduction of disulphide bonds or denaturation of non-covalent interactions.

Elastase-inhibiting peptide of low serine protease-inhibiting activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence is human polymorphonuclear leukocyte elastase inhibiting protein (SLPI) primary sequence (SLPI is residues 55-107). SLPI has much lower serine protease inhibiting activity. It can be used to treat lung assites tumours, chronic articular rheumatism, gum inflammation, muscular atrophy, allergic lung disease and shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               contains C-terminal portion of human polymorphonuclear leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; leukocyte elastase inhibitor; parotid secretion; emphysema; serine protease inhibitor; protease/protease inhibitor imbalance; pulmonary disease; polymorphonuclear granulocyte protease.

This introlled transce to the protesse inhibitors begins are larged and no more than 107 amino acids. The protesse inhibitors are capable of and no more than 107 amino acids. The protesse inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97524 - AAC97534,

AAC97574 - AAC97581 and AAC97614 - AAC97641 represent DNA encoding the protesse inhibitors of the invention, and include oligonucleotide sequences used in the isolation and characterisation of the proteins. Primers AAC97535 - AAC97573 and AAC9582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors Peptide sequences AAB53098 - AAB53122 represent the protease inhibitors protease inhibitors. The protease inhibitors have cytostatic and anti-inflammatory activity. The serine protease inhibitor protein is useful for treating a construction, e.g. emphysema, arthritis, glomerulonephritis, periodenticis, muscular dystrophy or tumour invasion. It is also useful construction, e.g. emphysema, arthritis, glomerulonephritis, for modulating protease activity. The DNAs are useful for producing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                       The invention relates to a DNA sequence encoding an analog of a mammalian serine protease inhibitor protein. The analog comprises at least eight cysteine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a least one operational element consisting of a promoter, an operator, or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin. The present sequence represents a recombinant serine protease inhibitor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A non-inflammatory vector composition, comprising nucleic acids and antiinflammatory compound, useful for treating inflammatory disorders,

                                                                                        The sequences given in ABB47402-405 represent secretory leukoprotease inactivator (SLPI) proteins which may be used in may be used in gene therapy. SLPI is a major antiprotease present in the lung. A mutation replacing Met/3 of the mature protein with Leu renders the protein oxidation resistant. Therefore it can be used to treat patients with chronic obstructive pulmonary disease (COPD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel fusion protein useful for inhibiting protease activity associated with a disorder such as emphysema, asthma, comprises a first protease inhibitor comprising alpha 1-antitrypsin and a second protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel fusion protein comprising a first protease inhibitor comprising an alphal-antitrypsin or its functionally active portion and a second protease inhibitor or its functionally active protein. The fusion proteins of the invention may act as an inhibitor of protease activity. The fusion protein of the invention is useful for inhibiting procease activity associated with a disorder such as emphysema, asthma, chronic obstructive pulmonary disease,
                                                                                                                                                                                                                                                                                                           2; Gaps

Purified serine protease inhibitor proteins isolated from parotid secretions, useful for inhibiting leukocyte elastase, cathepsin G, trypsin and/or pancreatic elastase

Example 3; Page 8; 11pp; English

This invention relates to a novel serine protease inhibitor protein comprising a purified, single-polypeptide-chain protein having at least one active site possessing serine protease inhibitor activity. The protein of the invention has leukocyte elastase inhibitor, cathepsin G inhibitor, trypsin inhibitor and pancreatic elastase inhibitor activities. A disturbance of the protease/protease inhibitor balance may lead to diseases associated with protease-mediated tissue

```
glomerulonephritis, periodontitis, macular dystrophy, and tumour invasion. The invention also comprises analogues of the serine protease inhibitors in which the amino acid sequence is varied so as to improve the properties of the protein. These improvements include resistance to oxidative inactivation, improved inhibition of pancreatic present sequence represents the generic serine protease improved inhibition of catheppin G and trypsin. The protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Serine protease inhibitor; human; tumour invasion; macular dystrophy; leukocyte elastese inhibitor; cathepsin G inhibitor; trypsin inhibitor; panoreatic elastase inhibitor; emphysema; rheumatoid arthritis; glomerulonephritis; periodontitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel serine protease inhibitor protein comprising a purified, single-polypeptide-chain protein having at least one active site possessing serine protease inhibitor activity. This invention relates to new purified and isolated mammalian serine protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of
                                                                                                                                                                                                                 inhibitor protein sequence #3 of the invention.

Note, This sequence is not shown in the specification but was created by the indexer from the sequence shown in AAU75057 and the information
               inhibitor, trypsin inhibitor and pancreatic elastase inhibitor activities. A disturbance of the protease/protease inhibitor balance may lead to diseases associated with protease-mediated tissue destruction such as emphysema, rheumatoid arthritis, glomerulonephritis, periodontisis, macular dystrophy, and tumour invasion. The invention also comprises analogues of the serine protease inhibitors in which the amino acid sequence is varied so as to improve
                                                                                                                                         the properties of the protein. These improvements include resistence to oxidative inactivation, improved inhibition of pancreatic elastase, improved inhibition of cathepsin G and trypsin. The present sequence represents the generic human serine protease
protein of the invention has leukocyte elastase inhibitor, cathepsin G

contributing chymotrypsin and elastase. Sequences AAC97526 - AAC97534,
AAC97574 - AAC97581 and AAC97614 - AAC97641 represent DNA encoding the protease inhibitors of the invention, and include oligonucleotide cadences essent in the isolation and characterisation of the proteins.
Construction of DNA encoding the protease inhibitors. Peptide sequences CAB53098 - AAC97573 and AAC9582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors. Peptide sequences AAB53098 - AAB53122 represent the protease inhibitors of the invention and various other peptides used in the isolation of the protease inhibitors.
CC The protease inhibitors have cytostatic and anti-inflammatory activity.
The serine protease inhibitor protein is useful for treating a protease mediated condition, which includes protease mediated tissue destruction, e.g. emphysema, arthritis, glomerulonephritis, periodontitis, muscular dystrophy or tumour invasion. It is also useful for proteins, especially by recombinant methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence of protein with the biological activity of HUSI (human seminal plasma inhibitor) type I inhibitors encoded on pRH 34.
                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              chronic cervical inflammation, inflammation associated with excessive mucus prodn.; post-operative bleeding caused by hyperfibrinolysis, and shock. They are esp. suitable for administration as spray or inhalation. The expression control sequence on the DNA fragment in AAN70928 is bound to the 5' end of HUSI cDNA in an expression vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HUSI-type I inhibitors are useful for treating chronic bronchitis,

These tryptase inhibitors were identified by incubation with a tryptase containing material and a tryptase substrate. The mixture is then monitored for cleavage of the substrate over time. By comparing the cleavage of the substrate in the presence and the absence of the targets as to whether the substrance is a tryptase inhibitor. The tryptase substrate used is preferably vasoactive intestinal peptide (VIP), calcitonin gene-related peptide (CGRP) or peptide histidine-methionine (PMM). Mast cell, or tryptase, mediated conditions in a mammal can be treated by administering an active fragment of SLPI or amutein (such as AAR84055) to the mammal. These conditions include asthma and allergic rhinitis.

```
assessing the relative severity of ovarian cancer, in tests for monitoring a patient in remission from ovarian cancer and in tests for monitoring disease status in a patient being treated for ovarian cancer. The methods can additionally be used to identify a particular tumour as being an ovarian tumour (i.e., an epithelial ovarian tumour selected from serous cystadenoma, borderline serous tumour, serous cystadenocarcinoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mucinous cystadenoma, borderline mucinous tumour, mucinous cystadenocarcinoma, endometrioid carcinoma, undifferentiated carcinoma, cystadenocarcinoma, cystadenofibroma, adenofibroma and Brenner tumour. The ovarian tumour marker genes of the invention were identified using SAGE (serial analysis of gene expression) and were found to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to methods for diagnosing and prognosing ovarian tumours in an individual via the detection and measurement of the expression of ovarian tumour marker genes (ABA831081-ABA83122, ABA83180, ABA83181 and ABA83183). The methods of the invention are useful for detecting an ovarian tumour in a patient, for identifying an individual at increased risk for developing ovarian cancer, in prognostic tests for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               developing ovarian cancer, and determining effectiveness of ovarian cancer treatment, by measuring expression level of ovarian tumor marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting and identifying ovarian tumor, identifying increased risk for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          overexpressed in a broad variety of ovarian epithelial tumour cells relative to normal ovarian epithelial cells. The marker genes are implicated in immune response pathways, in the regulation of cell proliferation and in protein folding, and many of these are membrane-localised or secreted. In addition to their use as diagnostic and prognostic markers, the ovarian tumour marker genes or their encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 23; Page 98; 140pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequences given in AAB47402-405 represent secretory leukoprotease inactivator (SLPI) proteins which may be used in may be used in gene therapy. SLPI is a major antiprotease present in the lung. A mutation replacing Met73 of the mature protein with Leu renders the protein oxidation resistant. Therefore it can be used to treat patients with chronic obstructive pulmonary disease (COPD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A non-inflammatory vector composition, comprising nucleic acids and antiinflammatory compound, useful for treating inflammatory disorders, e.g. rheumatoid arthirits, emphysema, cystic fibrosis, adult respiratory distress syndrome and asthma
                                                                                                                             Gaps

Human, cytostatic, gynecological, elastase, cathepsin G, gene therapy, endometriosis, antileukoprotease, ALP; secretory leukoprotease inhibitor, SLPI, alphal-proteinase inhibitor, alphal-PI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention relates to a method for treating endometriosis in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    subject, comprising administering to the subject an amount of antileukoprocrases (ALP) effective to inhibit the activity of elastase or cathepsin G, thereby inhibiting ectopic implantation of endometrial fragments. The present sequence is human ALP. ALP is also known as secretory leukoprocease inhibitor (SLPI) and alphal-proteinase inhibitor (alphal-PI). ALP plays an important role in the defence of epithelial surfaces against proteolytic damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treating and diagnosing endometriosis or promoting embryo implantation comprises determining or modulating antileukoprotease activity in a

```

mammal, comprising comparing the expression of a nucleic acid encoding and antileukoprotease polypeptide in mammal-derived cell population, and expression of a nucleic acid encoding the antileukoprotease in an inflammation positive or negative reference profile. Also a fisclosed are a method for identifying a compound that inhibits lung inflammation comprising providing a cell expression antileukoprotease, contacting the cell whith a test compound and measuring the expression antileukoprotease in the cell, where a decrease in expression in the presence of the test compound compared to that in the absence of the test compound inhibits lung inflammation.

Also disclosed is assessing prognosis of a mammal with a cancer or a structure of the cell in the compound inhibits lung inflammation. nucleic acid encoding the antileukoprotease in a cancer reference profile, where a substantial similarity between the expression of the nucleic acid sequence in mammal-derived cell population and the cancer reference profile indicates an adverse prognosis of the mammal. The method is used for diagnosing an inflammatory lung disorder such as emphysema, asthma, bronchitis, or allergy in a mammal. The compound is useful for treating or preventing an inflammatory disease in a mammal, preferably human, by inhibiting an inflammatory disease in a mammal, in the method binds to an antileukoprotease nucleic acid, and is a nitleukoprotease antibody, or antileukoprotease antisense nucleic acid, and is a natileukoprotease antisense nucleic acid, with thyroid carcinoma, ovarian carcinoma or renal cell carcinoma. The present sequence is a human antileukoprotease. a thyroid tumour, comprising measuring the expression of a nucleic acid encoding the antileukoprotease in a mammal-derived cell population and comparing expression of the nucleic acid to the expression of a

tunnour metastagis and tunnour angiogenesis, gastric ulceration, osteoporosis, Paget's disease, glomerulonephritis, scleroderma, malaria, bacterial infection, Alzheimer's disease, hypertension and muscular dystrophy. The present sequence represents the SLAPI fusion protein of This invention relates to a novel fusion protein comprising a first processe inhibitor comprising an alphal-antitrypsin or its functionally active portion and a second protease inhibitor or its functionally active protein. The fusion proteins of the invention may act as an inhibitor of protease activity. The fusion protein of the invention is useful for inhibiting procease activity associated with a disorder such as emphysema, asthma, chronic obstructive pulmonary disease, cystic fibrosis, otitis media, otitis external or HIV infection, or for treating an individual suffering from or at risk for a disease or disorder involving unwanted protease activity. The proteins are useful for treating dermatological diseases such as atopic dermatitis, eczema and psoriasis, in inflammatory responses to viral infection, and for treating herpes infection, corneal or epidermal ulceration, chronic non-healing wounds, sepsis, rheumatoid arthritis, periodontal disease, the invention.

protease inhibitor comprising an alphal-antitrypsin or its functionally active portion and a second protease inhibitor or its functionally active portion and a second protease inhibitor or its functionally carive protein. The fusion proteins of the invention may act as an inhibitor of procease activity. The fusion protein of the invention is useful for inhibiting protease activity associated with a disorder such as emphysema, chronic obstructive pulmonary disease, cystic fibrosis, otitis media, chronic obstructive pulmonary disease, cystic fibrosis, otitis media, otitis external or HIV infection, or for treating an individual suffering from or at risk for a disease or disorder involving unwanted protease activity. The proteins are useful for treating dermatological diseases such as atopic dermatitis, eczema and psoriasis, in inflammatory responses to viral infection, and for treating herpes infection, corneal or epidemal ulceration, chronic trement metastasis and tumour angiogenesis, gastric ulceration, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, millian, chronic trements the millian disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   osteoporosis, Paget's disease, glomerulonephritis, scleroderma, malaria,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel fusion protein useful for inhibiting protease activity associated with a disorder such as emphysema, asthma, comprises a first protease inhibitor comprising alpha 1-antitrypsin and a second protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                rSLAD1; Alzheimer's disease; tumour angiogenesis; malaria; emphysema; asthma; chronic obstructive pulmonary disease; cystic fibrosis; ottitis media; ottitis external; HIV; psoriasis; eczema; humannodeficiency virus; atopic dermatitis; muscular dystrophy; herpes; ulceration; sepsis; rheumatoid arthritis; periodontal disease; tumour metastasis; osteoporosis; Paget's disease; scleroderma;

(B) is resistant to heat, acid, and a variety of proteolytic enzymes, is thermodynamically stable in extracellular conditions, and exhibits a high degree of self assembly forming an active tertiary structure in the absence of biochemical stimul. The present sequence represents a native serine protease inhibitor from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a DNA sequence (A) encoding an analogue of a mammalian serine protease inhibitor (B). The DNA sequences and recombinant methods allow manufacture of a class of inhibitors of e.g. cathepsin G, elastase, and trypsin, with different specificities. The recombinant serine protease product can be directed to act intracellularly or extracellularly and is useful in treating conditions caused by a disturbance in the native protease/protease inhibitor muscular dystrophy, tumour invasion, sepsis, and acute leukemia. (A) allows (B) to be recombinantly produced in sufficient quantities and
bacterial infection, Alzheimer's disease, hypertension and muscular dystrophy. The present sequence represents the rSLAP1 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Serine protease inhibitor; human; emphysema; arthritis; peridontitis; muscular dystrophy; tumour invasion; glomerulonephritis; sepsis; acute leukemia.

An anti-human SLPI antibody specific to the C-terminal of human SPLI was prepd. SPLI has neutrophil elastase inhibiting activity. The C-terminal comprises amino acids 55-107 of SPLI. The antibody may be used in an immunoassay for the diagnosis and the treatment of inflammatory diseases, esp. lung diseas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptide corresponds to amino acids Asn55-Ala107 of secretory leukocyte protease inhibitor (SLPI). It is used as the active component of a blood coagulation inhibitor which has cathepsin G inhibiting activity. It inhibits platelet aggregation through inhibition of cathepsin G and release of serotonin and may be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
The active elastase inhibiting polypeptide was prepd. by sulphonating inactive elastase inhibiting polypeptide obtd. by genetic engineering, and direct disulphidation of the obtd. sulphoderivative without passing through the thiol deriv. stage. The active elastase inhibiting polypeptide has an activity ratio for trypsin inhibiting activity against elastase inhibitory activity of at least 1,000. The active elastase inhibiting polypeptide may be produced in high yield and with good reducibility.
                                                                                                                                                                                                                .

RESULT 54 AAW01847

```
AAW01843-W01851 are peptides derived from the C-terminal portion of human antileukoprotease. The peptides inhibit the action of tryptase clara. Tryptase clara is responsible for the activation of viruses that have exosporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                       Antileukoprotease; tryptase clara; carboxyl terminal; virus; viral; respiratory tract; lung disease; respiratory syncytial virus; RSV; influenza; Haemophilus influenzae; mumps; measles; paramyxovirus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antileukoprotease, tryptase clara, carboxyl terminal, virus, viral, respiratory tract, lung disease, respiratory syncytial virus, RSV, influenza, Haemophilus influenzae, mumps, measles, paramyxovirus,

                                                                                                                                                                                                                                                              AAW01843-W01851 are peptides derived from the C-terminal portion of human antileukoprotease. The peptides inhibit the action of tryptase clara. Tryptase clara is responsible for the activation of viruses that have exosporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Serine protease inhibitor; cytostatic; anti-inflammatory; arthritis; protease mediated tissue destruction; emphysema; glomerulonephritis; periodontitis; muscular dystrophy; tumour invasion; chymotrypsin;
                                                                                                                                                                  Tryptase clara inhibitor comprises anti:leuko:protease fragment -useful for treatment and prevention of tryptase clara activated viral diseases of the respiratory tract, e.g. influenza, RSV, mumps and measles
                                                                                                                                                                                                                                                                                                                                                                                                                              ..

This invention relates to new purified and isolated mammalian serine protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97526 - AAC97534, AAC97574 - AAC97531 and AAC97641 represent DNA encoding the protease inhibitors of the invention, and include oligonucleotide sequences used in the isolation and characterisation of the protease inhibitors. Primars AAC97535 - AAC976373 and AAC95582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors. Peptide sequences ABE30308 - AAC97632 represent the protease inhibitors of the invention and various other peptides used in the isolation of the protease inhibitors have cytostatic and anti-inflammatory activity. The serine protease inhibitor protein is useful for treating a protease inhibitor protein suseful for treating a protease inhibitor protein suseful for treating a protease activity, the physema arthritis, glomerulonephritis, muscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tryptase clara inhibitor comprises anti:leuko:protease fragment -useful for treatment and prevention of tryptase clara activated viral diseases of the respiratory tract, e.g. influenza, RSV, mumps

                                               AAW01843-W01851 are peptides derived from the C-terminal portion of human antileukoprotease. The peptides inhibit the action of tryptase clara is responsible for the activation of viruses that excessorium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW01843-W01851 are peptides derived from the C-terminal portion of human antileukoprotease. The peptides inhibit the action of tryptase clara is responsible for the activation of viruses that have exceporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                   Gaps

The peptides inhibit the action of tryptase clara. Tryptase clara is responsible for the activation of viruses that have exosporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                          Antileukoprotease; tryptase clara; carboxyl terminal; virus; viral; respiratory tract; lung disease; respiratory syncytial virus; RSV; influenza; Haemophilus influenzae; mumps; measles; paramyxovirus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tryptase clara inhibitor comprises anti:leuko:protease fragment -useful for treatment and prevention of tryptase clara activated viral diseases of the respiratory tract, e.g. influenza, RSV, mumps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

                                                                                                                                                                                                                                                                                                                 The sequences given in AAB47402-405 represent secretory leukoprotease inactivator (SLPI) proteins which may be used in may be used in gene therapy. SLPI is a major antiprotease present in the lung. A mutation replacing Met/3 of the mature protein with Leu renders the protein oxidation resistant. Therefore it can be used to treat patients with chronic obstructive pulmonary disease (COPD).

The sequences given in AAB47402-405 represent secretory leukoprotease inactivator (SLPI) proteins which may be used in may be used in gene therapy. SLPI is a major antiprotease present in the lung. A mutation replacing Met73 of the mature protein with Leu renders the protein oxidation resistant. Therefore it can be used to treat patients with chronic obstructive pulmonary disease (COPD).
                                                                                                                                                                                                                                                                                                                                                                       A non-inflammatory vector composition, comprising nucleic acids and antinflammatory compound, useful for treating inflammatory disorders, e.g. rheumatoid arthritis, emphysema, cystic fibrosis, adult

                                                                                                                                                                 This invention relates to new purified and isolated mammalian serine protease inhibitors are capable of and on more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97526 - AAC97534, AAC97574 - AAC97581 and AAC97614 - AAC97641 represent DNA encoding the protease inhibitors of the invention, and include obligonucleotide sequences used in the isolation and characterisation of the proteins. Primers AAC97535 - AAC97573 and AAC95582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors. Peptide sequences AAB53122 represent the protease inhibitors Peptide sequences various other peptides used in the isolation of the protease inhibitors protease inhibitors are inhibitors have cytostatic and anti-inflammatory activity. The serine protease inhibitor protein is useful for treating protease inhibitor, which includes protease mediated tissue destruction, e.g. emphysem, arthritis, glomerulonephritis, puscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the proteins, especially by recombinant methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ij

The invention relates to a DNA sequence encoding an analog of a mammalian serine protease inhibitor protein. The analog comprises at least eight cysteine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a leader sequence, a Shine-Dalgarno sequence, a ribosome binding site or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin. The present sequence represents a secretory leukocyte protease inhibitor (SLPI) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inhibitor, human; tryptase; vasoactive intestinal peptide; VIP; CGRP; calcitonin gene-related peptide; peptide histidine-methionine; mammal; PHM, mast cell; asthma; allergic rhinitis; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR84055, and AAW00653-W00666 represent fragments and muteins of human
secretory leukocyte protease inhibitor (SLPI) (see AAR84056 for full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Secretory leukocyte protease inhibitor; SLPI; N-terminus; proteolysis;
                                                            New DNA sequences, useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mutein #1 of secretory leukocyte protease inhibitor residues 5-102.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of secretory leukocyte protease inhibitor - as inhibitor of tryptase for treating mast cell-mediated conditions such as asthma and allergic rhinitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S,

```
length wild type sequence). This sequence represents a Leu-72-Arg mutein of residues 5-102 of SLIP. SLPI is a potent inhibitor of the proteolytic activity of tryptase. These tryptase inhibitors were identified by incubation with a tryptase containing material and a tryptase substrate. The mixture is then monitored for cleavage of the substrate over time. By comparing the cleavage of the substrate in the presence and the absence of the test substrance determines as to whether
                                                                                                                                                                                                                                                                                                                                                                                                                                                            the substance is a tryptase inhibitor. The tryptase substrate used is preferably vasoactive intestinal peptide (VIP), calcitonin gene-related peptide (CGRP) or peptide histidine-methionine (PHM). Mast cell, or tryptase, mediated conditions in amammal can be treated by administering an active fragment of SLPI (such as this sequence) or a mutein to the mammal. These conditions include asthma and allergic rhinitis.

Use of secretory leukocyte protease inhibitor - as inhibitor of tryptase for treating mast cell-mediated conditions such as asthma and allergic rhinitis

Claim 19; ; 65pp; English.

AAR84055, and AAW00653-W00666 represent fragments and muteins of human secretory leukocyte protease inhibitor (SLPI) (see AAR84056 for full length wild type sequence). This sequence represents a Leu-72-Lys mutein of residues 5-102 of SLIP. SLPI is a potent inhibitor of the proteolytic activity of tryptase. These tryptase inhibitors were identified by incubation with a tryptase containing material and a tryptase substrate. The mixture is then monitored for cleavage of the

```
substrate over time. By comparing the cleavage of the substrate in the presence and the absence of the test substance determines as to whether the substance is a tryptase inhibitor. The tryptase substrate used is preferably vasoactive intestinal peptide (VIP), calcitonin gene-related peptide (CGRP) or peptide histidine-methionine (PHM). Mast cell, or an active managed conditions in a mammal can be treated by administering an active fragment of SLPI (such as this sequence) or a mutein to the mammal. These conditions include asthma and allergic rhinitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR84055, and AAW00653-W00666 represent fragments and muteins of human secretory leukocyte protease inhibitor (SLPI) (see AAR84056 for full length will type sequence. This sequence represents a Leu-19-Arg mutein of residues 5-102 of SLIP. SLIP is a potent inhibitor of the proteolytic activity of tryptase. These tryptase inhibitors were proteolytic activity of tryptase. These tryptase inhibitors were tryptase substrate. The mixture is then monitored for cleavage of the substrate over time. By comparing the cleavage of the substrate in the presence and the absence of the test substrace determines as to whether the substrace is a tryptase inhibitor. The tryptase substrate used is preferably vascactive intestinal peptide (VIP), calcitonin gene-related peptide (GGRP) or peptide histidine-methionine (PHM). Mast cell, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Secretory leukocyte protease inhibitor; SLPI; N-terminus; proteolysis; inhibitor; human; tryptase; vasoactive intestinal peptide; VIP; CGRP; calcitonin gene-related peptide, peptide histidine-methionine; mammal; PHM; mast cell; asthma; allergic rhinitis; therapy.

Secretory leukocyte protease inhibitor (SLPI) (see AAR84055 for full secretory leukocyte protease inhibitor (SLPI) (see AAR84056 for full length wild type sequence). This sequence represents a Leu-19-Lys mutein of residues 5-102 of SLIP. SLPI is a potent inhibitor of the proteolytic activity of tryptase. These tryptase inhibitors were identified by incubation with a tryptase containing material and a tryptase substrate. The mixture is then monitored for cleavage of the substrate over time. By comparing the cleavage of the substrate in the presence and the absence of the test substrace determines as to whether the substrace is a tryptase inhibitor. The tryptase substrate used is preferably vasoactive intestinal peptide (VIP), calcitonin gene-related peptide (CGRP) or peptide histidine-methionine (PHM). Mast cell, or tryptase, mediated conditions in a mammal can be treated by administering an active fragment of SLPI (such as this sequence) or a mutein to the mammal. These conditions include asthma and allergic rhinitis.
tryptase, mediated conditions in a mammal can be treated by administering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Secretory leukocyte protease inhibitor; SLPI; N-terminus; proteolysis; inhibitor; human; tryptase; vasoactive intestinal peptide; VIP; CGRP; calcitonin gene-related peptide; peptide histidine-methionine; mammal; PHM; mast cell; asthma; allergic rhinitis; therapy.

This sequence corresponds to residues 5-102 of the full length wild type sequence. SLPI is a potent inhibitor of the proteolytic activity of tryptase. These tryptase inhibitors were infantified by incubation with a tryptase containing material and a tryptase substrate. The mixture is then monitored for cleavage of the substrate in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   presence and the absence of the test substance determines as to whether the substance is a tryptese inhibitor. The tryptase substrate used is preferably vasoactive intestinal peptide (VIP), calcitonin gene-related peptide (CGRP) or peptide histidine-methionine (PHM). Mast cell, or tryptase, mediated conditions in a mammal can be treated by administering an active fragment of SLPI (such as this sequence) or a mutenin to the mammal. These conditions include asthma and allergic
                                                                                                                                                                                                                                                                                                                                                      inhibitor; human; tryptase; vasoactive incestinal peptide, VIP, CGRP, calcitonin gene-related peptide; peptide histidine-methionine; mammal; PHM, mast cell; asthma; allergic rhinitis; therapy.
                                                                                                                                                                                                                                                                                                                                         Secretory leukocyte protease inhibitor; SLPI; N-terminus; proteolysis;

AARSB594 is the Arg59-Ala107 section of secretory leukocyte protease inhibitor (SLPI), both it and the sequence described in AARSB595 can used in the treatment of respiratory obstruction. Used orally or parenterally they are particulary useful in the treatment of chronic bronchitis, pulmonary emphysema and asthma.
                                                                                                                                  Secretory leukocyte protease inhibitor; SLPI; asthma; chronic bronchitis; pulmonary emphysema; respiratory obstruction.
                                                                                                Secretory leukocyte protease inhibitor derivative, Arg59-Ala107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Secretory leukocyte protease inhibitor; interstitial pneumonia.
                                                                                                                                                                                                                                                                                                                                                                                                                           Agent to treat respiratory obstruction e.g. in asthma - contg. polypeptide of specified sequence derived from secretory leukocyte protease inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 41.6%; Score 136; DB 15; Length 49; 51.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR66284 shows the amino acid sequence of SLPI (secretory leukocyte protease inhibitor) from Arg at position 58 to Ala at position 107. This polypeptide is used in a drug for treating respiratory tract obturation, and is esp. useful for treating respiratory organ diseases caused by neurrophils. A dose of 10 mg/kg of the polypeptide (as a fusion protein) gave a change in the difference of the pressure of the lung of 11.5 cm H2O after 9 min., compared ot 7.5 cm H2O for saline.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                         Gaps
                                                                                                                 A novel agent for treatment of interstitial pneumonia contains this polypeptide or AR75185 as an active agent. The peptides are partial sequences of secretory leukcyte protease inhibitor (SLPI). In particular, this polypeptide represents Arg59 to Ala107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating respiratory tract obturation caused by neutrophil endotoxins - using drug containing fragment of {\tt SLPT} polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .,

AAW01843-W01851 are peptides derived from the C-terminal portion of human antileukoprotease. The peptides inhibit the action of tryptase clara. Tryptase clara is responsible for the activation of viruses that have exosporium glycoproteins, such as those that infect the respiratory tract. The peptides are useful for the treatment and prevention of, for example, influenza, parainfluenza, respiratory syncytial virus (RSV),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tryptase clara inhibitor comprises anti:leuko:protease fragment -useful for treatment and prevention of tryptase clara activated viral diseases of the respiratory tract, e.g. influenza, RSV, mumps
